Dear Hiring Manager,

I am interested in enterprise-architecture roles requiring target-state thinking, governance, integration, data, standards and a strong connection between architecture and delivery. I govern enterprise and solution architecture for configurable, modular and API-driven capabilities spanning shared services, RBAC, workflows, document/archiving functions, auditability, data governance, integrations, security, performance, resilience and business continuity.

My architecture perspective comes from delivery rather than theory alone. I progressed from hands-on engineering through development leadership and enterprise/e-government implementation before moving into national-scale technology governance. I can therefore translate business capability needs into pragmatic architecture decisions while accounting for engineering feasibility, integration dependencies, operational readiness and long-term maintainability.

I would bring a structured, outcome-focused approach: clear ownership, strong stakeholder alignment, disciplined governance, practical technical judgment and attention to what is required for successful implementation and sustainable operation.

I would welcome the opportunity to discuss how this experience could support your organization's priorities and the outcomes expected from the role.

Sincerely,
Mahmoud Salama
