Dear Hiring Manager,

I am interested in broad IT and information-systems management roles combining enterprise applications, systems, service operations, support, governance and delivery. I currently lead a 54-person technology organization with seven direct reports across enterprise systems, software/application delivery, support/customer service, data/reporting, architecture and technology governance. This includes national-scale platforms serving approximately 60K users, 90K facilities/entities and around 1M transactions per month.

Previously, as General Manager for Systems, Applications & Technical Support, I directed applications, systems and stakeholder-service delivery across procurement, medical supply, inventory, reporting, publishing and workflow capabilities. I strengthened ownership, QA/release controls, incident/RCA practices, documentation, onboarding, training and support procedures while coordinating multi-agency initiatives and nationwide adoption.

I would bring a structured, outcome-focused approach: clear ownership, strong stakeholder alignment, disciplined governance, practical technical judgment and attention to what is required for successful implementation and sustainable operation.

I would welcome the opportunity to discuss how this experience could support your organization's priorities and the outcomes expected from the role.

Sincerely,
Mahmoud Salama
