Dear Hiring Manager,

I am interested in software-engineering and application-delivery leadership roles where technical quality, team leadership, SDLC governance and reliable releases are equally important. My career began in hands-on Linux/web and C#/I.NET engineering and progressed through leadership of six-person and 10+ developer teams before moving into enterprise technology management. I have remained close to architecture, coding standards, databases, integrations, testing, deployment, production support and engineering-quality practices.

At UPA, I now govern end-to-end SDLC and delivery across national-scale enterprise platforms, from requirements and architecture through engineering, QA/UAT, release, deployment, service transition and continuous improvement. I therefore bring both the technical credibility to lead engineering teams and the governance discipline needed to deliver dependable enterprise software.

I would bring a structured, outcome-focused approach: clear ownership, strong stakeholder alignment, disciplined governance, practical technical judgment and attention to what is required for successful implementation and sustainable operation.

I would welcome the opportunity to discuss how this experience could support your organization's priorities and the outcomes expected from the role.

Sincerely,
Mahmoud Salama
