Dear Hiring Manager,

I am interested in broad senior technology roles requiring a balanced combination of strategy, transformation, enterprise systems, architecture, delivery and operations. I bring 18+ years progressing from hands-on engineering to development leadership, enterprise/e-government delivery and national-scale technology management across Egypt and Oman. I currently lead a 54-person organization with seven direct reports.

My scope spans technology strategy, digital transformation, enterprise and solution architecture, software/application delivery, program and portfolio governance, data and integration, service operations, security/risk, vendor management and executive stakeholder engagement. This breadth is backed by delivery experience across 15+ enterprise/e-government platforms in Oman and 150+ major and mid-sized Keyframe projects.

I would bring a structured, outcome-focused approach: clear ownership, strong stakeholder alignment, disciplined governance, practical technical judgment and attention to successful implementation and sustainable operation.

I would welcome the opportunity to discuss how this experience could support your organization's priorities and the outcomes expected from the role.

Sincerely,
Mahmoud Salama
