---

Dear Hiring Manager,

I am applying for Enterprise Architect, Solution Architect, or Architecture leadership opportunities. I bring more than 18 years of experience aligning institutional priorities with secure, scalable platforms, integration standards, data environments, technology roadmaps, and governed delivery across Egypt and the GCC.

In my current role, I govern enterprise and solution architecture, platform modernization, systems integration, data governance, security controls, and long-term roadmaps across a major government technology portfolio. I oversee integrations with Microsoft Dynamics 365 ERP and CRM, the National Health Sector Data Warehouse, Power BI, Apache Superset, and operational platforms supporting more than 12,000 public-sector entities.

My architecture record includes an integrated 10-platform procurement and medical-supply ecosystem, a governed data environment processing 12M+ records daily, REST and GraphQL services, controlled data exchange, workflow alignment, master data management, operational data stores, RBAC, audit logs, and high-availability service standards.

I combine architecture governance with a hands-on engineering foundation in C#, ASP.NET Core, React.js, Node.js, SQL platforms, APIs, Docker, Jenkins, and CI/CD. This enables me to connect business capability, architecture decisions, implementation constraints, security, adoption, and operational performance.

I would welcome the opportunity to discuss how this experience can contribute to your organization. Thank you for your consideration.

Sincerely,

**Mahmoud Salama**
