Dear Hiring Manager,

I am writing to express my interest in senior technology leadership, digital transformation, enterprise architecture, information systems, and technology program delivery opportunities. With more than 18 years of experience across government, healthcare, education, and enterprise environments in Egypt and the GCC, I offer a combination of executive leadership, architectural depth, and hands-on software delivery.

In my current role as Chief Technology & Digital Transformation Officer and Enterprise Architect at the Egyptian Authority for Unified Procurement, Medical Supply & Medical Technology, I lead enterprise architecture, platform modernization, systems integration, data and analytics, IT governance, and a multidisciplinary organization of more than 40 professionals. I direct an EGP 150M+ technology portfolio supporting 12,000+ public-sector entities while aligning national-scale platforms with security, operational resilience, stakeholder priorities, and measurable service outcomes.

My record includes leading or supporting 150+ digital initiatives, sustaining more than 99% availability across critical platforms, accelerating executive reporting by approximately 70%, reducing selected procurement workflows by up to 74%, and enabling automation that cut manual handling by as much as 90%. I have directed Microsoft Dynamics 365 ERP and CRM integrations, a national health-sector data warehouse processing 12M+ records daily, digital procurement and supply-chain platforms, and enterprise analytics solutions that strengthen governance and decision-making.

My career foundation in software engineering and full-stack development allows me to contribute credibly from boardroom strategy through architecture and delivery detail. I have led teams across Egypt and Oman, established QA and release governance, strengthened API and security standards, managed vendors and senior stakeholders, and supported digital adoption at institutional scale. I am particularly effective in roles requiring modernization of complex environments, alignment of technology with business priorities, and coordinated delivery across multiple teams and organizations.

I would welcome the opportunity to bring this combination of technology strategy, enterprise architecture, transformation leadership, and accountable execution to your organization. Thank you for considering my application.

Sincerely,

Mahmoud Salama

Chief Technology & Digital Transformation Officer | Enterprise Architect
